

Design Services

Website Design

Catney Web Services is happy to create a custom design for your web site or build your site based on your own design. As we now use Joomla to create fully content managed systems, it is possible to choose from literally hundreds of free templates for your website. If you find a template you like, it can easily be adapted to follow your desired colour scheme, include your own images and preferred fonts. If you have a website already that you are happy with, but would like to be able to change yourself, we can convert your website into a Joomla site, thus giving you the ability to update pages, add and delete pages, add and delete menu items. The possibilities are endless. Joomla is free open source software with no licence fees or restrictions.

With Joomla you can even change the way the site looks by selecting another template. Use the template chooser on the left to give this site a completely new look.

If however you have an existing web site that you would rather not update yourself, we can take on maintenance of the site for you and we also provide an E-mail answering service for businesses that do not currently have computing facilities in the work place or on the move.

We can create e-commerce websites in Actinic and we are now also looking at Zen Cart, a fully open source e-commerce solution.

Accessibility is something we consider extremely important and therefore endeavour to ensure that all new sites are compliant with accessibility requirements. For non-Joomla sites we use table free CSS websites to ensure ease of access for the visually impaired, whilst providing a visual experience for those without impairment.

Whatever your web site needs, please fill in our contact form and we will be happy to contact you and discuss your requirements.
